

SOWMYA SINDHU ROUTHU

sowmyasindhu.routhu@gmail.com

609-4019800

PROFESSIONAL SUMMARY:

- UI/Web Developer with over **11+ years** of professional experience in Web Designing and User Interface Development using Web Technologies.
- Experience in full Software Development Life Cycle (SDLC) that includes Analyzing, Designing, Coding, Testing, Implementation & Production Support.
- Experience designing User Interactive Web Pages using HTML5, CSS3, JavaScript, jQuery, AJAX, JSON.
- Extensive experience with server-side technology like PHP.
- Worked on \$http services to call Ajax and get JSON data from the server.
- Adept at integrating backend data and front-end applications using technologies like PHP, and MySQL.
- Experienced in using SOAP and REST for the implementation of web services.
- Experienced in Single Page Applications (SPA) using Angular, created Multiple & Nested Views, Routing, Controllers, Services, and Custom Directives.
- Experience in Database Analysis/Design/Normalization/Manipulation process using MySQL.
- Good Experience using Bootstrap for Responsive Web Design (RWD) and CSS media Queries.
- Expertise in coding optimized SQL queries on databases like MySQL.
- Developed UI specs for Unit and E2E testing using Karma, Jasmine, and Cucumber.
- Experienced in Continuous Integration (CI) and Continuous Delivery (CD) using Jenkins.
- Experience in making Responsive Web Pages using Media Queries, Twitter Bootstrap, and leveraging the benefits of CSS preprocessors SASS and LESS.
- Good working experience in using JavaScript new standards ES6 & Typescript. Utilized JavaScript design patterns: Module, Revealing Module, Singleton, and Prototype.
- Skilled at analyzing and solving cross-browser compatibility challenges and ability to maintain consistency and well-commented HTML and CSS markup.
- Expertise in debugging and troubleshooting existing code using Developer Tools.
- Experience in Cross browser compatibility testing and intellectual challenges in Responsive Web Design and Bootstrap.
- Strong communication, problem-solving, and planning skills, with the ability to work independently or in a team environment.
- Highly motivated to learn and showed strong leadership skills and proven ability to manage and motivate a team to achieve the best results.
- Experience in working with clients on-site, analyzing software requirements, and developing solutions.
- Excellent oral and written communication and interpersonal skills.
- Involved in understanding functional specifications and developing creative solutions to meet business requirements.

TECHNICAL SKILLS:

Web Technologies	HTML 5, CSS3, JavaScript, ES6, TypeScript, Angular 15/16/18/19/20, NodeJS, React JS,jQuery, AJAX, XML, MVC Design, PHP, SASS/LESS, MEAN,Ionic FrameWork.
Languages	Java, JavaScript, C++, C, PL/SQL, SQL, Typescript
IDE & Editors	VS Code, WebStorm, Sublime, NetBeans, Eclipse, Atom
Database	Oracle, MySQL, DB2, MongoDB,Mongoose
UI Frameworks	jQuery, Bootstrap, Babel, Webpack, Gulp, Chai, Mocha, Nightwatch, WebSocket, Apollo Client, Chalk,Jest,Pact,Cypress
Other Tools	Adobe Photoshop, AWS S3,AWS Lambda,Chrome Developers Tool, Sterling Integrator 5.2.x, MySQL Workbench, Jasmine, Karma, Elastic Search, Logstash, Filebeat, GraphQL.Git Hub Copilot

PROFESSIONAL EXPERIENCE:

Penske Truck Leasing – Reading, PA

June 30th 2025 – Present

Employer: Anagh Technologies

Penske’s Catalyst AI – Comparative Analytics (CA) is a large-scale Angular 18 micro-frontend platform delivering BI-driven analytics for Hubs, Hub-Profile, Fleet Overview, Roadcalls, Subscription Summary, and Customer Intelligence dashboards.

Responsibilities

- Developing and maintaining features in a complex **Angular 18 + Nx monorepo + Micro-Frontend (Module Federation)** architecture.
- Implementing scalable UI architecture using **Angular Signals, RxJS interop**, and **Signals-based state management** for more reactive and predictable data flow.
- Building reusable UI components, modal systems, filters, loaders, and shared utilities aligned with the Penske design system.
- Enhancing performance through **skeleton-first rendering**, optimized store patterns, and efficient API/state coordination.
- Collaborating with UX, Product, and Backend teams to deliver end-to-end features with consistency, accessibility, and responsive UI behavior.
- Leading front-end architecture discussions around state management, routing strategies, inter-MFE communication, and shared library patterns.
- Working with **Google Maps (WebGL)**, charting tools, and BI-driven data sets to build highly interactive analytical dashboards.
- Ensuring code quality through PR reviews, unit testing, documentation, and alignment with enterprise coding standards.
- Actively participating in Agile ceremonies, providing technical guidance, and supporting cross-team collaboration.
- Collaborated with backend Java teams to review and refine **Swagger (OpenAPI) contracts**, ensuring accurate request/response schemas, proper typing, and alignment with frontend consumption patterns.

Union Pacific Railroad (UPRR), Omaha, NE

Aug 31st 2021 – Jun 3 2025

Full Stack Developer

Employer: ConCentrix Catalyst

Involved in interacting with business analysts to understand the business flow and gather business requirements. Participated in discussions with the team and Followed Agile/Scrum methodology with a 2week sprint involved in daily Standup Meetings, Sprint Refinements, Backlog Meetings, and Code Review Meetings.

Responsibilities:

- Implemented Page Optimization techniques for web pages, Best Practices in TypeScript,javascript and handled Cross Browser compatibility issues in web pages.
- Used Angular 16.0 as the development framework to build a single-page application and do CRUD operations with the HTTP service.
- Extensively worked with making calls to WEB APIs to fetch the data from the back end as JSON response and parse it on the UI for DOM Manipulation.
- Used Postman Pro to check the response of the service.
- Created UI Architecture design using Angular components, a thorough understanding of core concepts like NgModules, services, Dependency Injection, and decorators.
- Used JENKINS to create a scheduler job for tasks to reduce downtime, increase productivity, and improve communication.
- Developed and deployed Angular applications integrated with AWS serverless architecture (including AWS Lambda, API Gateway, and DynamoDB).
- Built scalable and responsive front-end UIs with Angular, consuming RESTful APIs hosted on AWS.
- Utilized AWS Amplify for hosting and CI/CD of Angular applications in a cloud-native environment.
- Collaborated with backend teams to design event-driven architectures using AWS services like S3, SNS, and Lambda.
- Worked with Kendo Themes and SCSS customization to align the UI with brand-specific design systems.
- Implemented authentication using AWS Cognito for secure, scalable user management in Angular applications.
- Worked with Angular 16 to develop single-page applications, and worked with AKITA for managing Angular applications.
- Implemented the AKITA store to maintain the state of the application. AKITA store was used to store results after an angular injector observable retrieved the data from the backend. This was done to update the store and to update components subscribed to that store.
- Integrated Kendo UI with RxJS,AKITA, and REST APIs, ensuring reactive and scalable front-end architecture.
- Used Angular Material and Ionic UI components together to maintain a consistent look-and-feel across web and mobile platforms.
- Used Angular Reactive forms to implement complex forms and performed the validations using Form Builder.

Wells Fargo Inc. San Francisco CA
Front End Developer

July 15th 2020 – June 28th 2021

Employer: Ameayaa Technologies

Responsibilities:

- Implemented Page Optimization techniques for web pages, Best Practices in TypeScript, Javascript and handled Cross Browser compatibility issues in web pages.
- Used Angular 9.0 as the development framework to build a single-page application and do CRUD operations with the HTTP service.
- Integrated Angular frontends with AWS Lambda functions to build scalable, serverless web applications.
- Extensively worked with making calls to WEB APIs to fetch the data from the back end as JSON response and parse it on the UI for DOM Manipulation.
- Used Postman Pro to check the response of the service.
- Created UI Architecture design using Angular 9 components, a thorough understanding of core concepts like NgModules, services, Dependency Injection, and decorators.
- Worked with Angular 9 to develop single-page applications, and worked with ngrx for managing Angular applications.
- Implemented the NGRX store to maintain the state of the application. NGRX store was used to store results after an angular injector observable retrieved the data from the backend. Added logic to dispatch the action to the NGRX store, this was done to update the store and to update components subscribed to that store.
- Used various Angular custom directives and developed reusable components and templates that can be reused at various places in the application.
- Used Angular Reactive forms to implement complex forms and performed the validations using Form Builder.
- Implemented Angular Router to enable navigation from one view to the next as the customer performs application tasks.
- Used Kendo Dialogs, Modals, and Tooltips to create consistent and user-friendly UI flows.
- Used Angular CLI to generate components, services, and filters and compiled them in different environments.
- Using Zeplin for UX design and style guides.
- Developed cross-platform mobile applications using Ionic Framework and Angular, deploying to both Android and iOS using Capacitor.
- Used the Node Package Manager (NPM) to install libraries like angular-CLI, typescript, Javascript etc., which are required for developing an angular application in Node. Used Chrome Developer tool for testing and debugging.
- Used JIRA for bug tracking. Git is used as a version control tool and Jenkins is used for the continuous integration of builds.
- Implemented test cases and performed unit testing using Jest.
- Used kendo UI to create widgets like date picker, calendar, buttons, grid, file upload, etc.
- Implementing the documentation to describe application development, logic coding, and corrections.

SEI Investments, PA
Front End Developer

May 7th 2018 – Jan 8th 2020

Employer: Yoh, A Day & Zimmermann Company

The main objective of the project is to develop an interactive application called Tech Service Portal for the users to assess internal data from database and Apache server and different backgrounds intern stores the data in Elastic search. Elastic search helps in storing the historical data. Display in the portal with different views.

Responsibilities:

- Developed Web API using Node.JS and hosted on multiple load-balanced API instances.
- Responsible for the design and development of the web pages from mockups (PSD).
- Developed the Front end by using Angular 7/8 and JavaScript.
- Expertise in Angular framework and integrating them to Node.js server-side code.
- Have worked on AWS to integrate the server-side and client-side code.
- Integrated Angular frontends with AWS Lambda functions to build scalable, serverless web applications.
- Implemented authentication using AWS Cognito for secure, scalable user management in Angular applications.
- Utilize user stories to develop technical requirements to ultimately deliver new or modified unique expert-level programs, features, or modules, in a timely and cost-effective manner.
- Responsible for creating RESTFUL Web Services to serve data to the front-end application in JSON format.
- Responsible for making the dynamic page using AJAX, JSON, and jQuery.
- Developed Web API using Node.JS and hosted on multiple load-balanced API instances.
- Used JENKINS to create a scheduler job for tasks to reduce downtime, increase productivity, and improve communication.
- Utilize unique expert technical knowledge to influence system architecture, and future technological vision.
- Help define and develop the test and production environment, coordinate the migration of the system, and/or coordinate efforts with other projects.
- Customized Kendo Grid with features like pagination, filtering, sorting, inline & popup editing, column resizing/reordering, and virtual scrolling for handling large datasets efficiently.
- Used JIRA to keep track of bugs to reduce downtime, increase productivity, and improve communication.
- Handled cross browser/platform compatibility issues (IE, Firefox, and Safari) on both Windows.

Environment: Angular, JavaScript, jQuery, GIT, Bootstrap, Ajax, JSON, HTML5, CSS3, Oracle database, Eclipse, Dreamweaver, SPA, OOP, MongoDB, FLUX, Twitter Bootstrap, GIT, SASS, Grunt, Photoshop.

KMK Consulting Inc.,NJ
Web UI Developer

Jan 17th 2017 – Apr 28th 2018

Project: (Flexion BIT)

The main objective of the project is to develop an interactive application called Business Intelligence Tool (BIT) for the users to assess the performance of a pharmaceutical drug. The dashboard is developed with 3 main views; Geo Summary, Prescribers, and Managed Care to render KPI information for the Sales teams in the Healthcare

domain. Data for all the views is provided using REST API calls implemented using the summary provides Sales KPIs summary at various Geography levels, Prescribers view listed all the physicians in geography, and Managed Care tracked the performance of the pharmaceutical drug by channels (Medicare, Commercial, Cash, etc.).

Responsibilities:

- Worked on the User Interfaces using React JS in an agile development environment.
- Used Angular as a framework to create a Single Page Application (SPA) which can bind data to specific views and synchronize user requested data with the server using REST API calls.
- Configured UI application dependencies for runtime and unit testing and configured NPM and package.json.
- Implemented verification hash code using Node.js and added user validations and user permissions by using the Node.js.
- With the concept of ReactJS Worked on usage metrics and also end-to-end event tracing for analysis purposes.
- Implemented responsive design using media queries and advanced CSS3 and Bootstrap features.
- Used Jira as a project management tool and involved in end-to-end testing and fixed Jira defects during the Validation Test phase.
- Used GIT as the primary repository for backup and migration of content.

Environment: PHP, React Js, HTML5, CSS3, SASS, Jira, Node.js, Chai, Mocha, Babel, WebPack.

Project: (Entresto Dashboard)

The main objective of the project is to develop a Dashboard for the users to track the performance of a drug in the Healthcare domain. The tool is basically used by the Salesforce teams to assess the KPIs such as Volumes & Shares of the drug with respect to its competitors in the market.

Responsibilities:

- Developed dynamic web pages using HTML/HTML5, CSS/CSS3, jQuery, React JS, Bootstrap, CSS3 and Ajax
- Developed a robust process to integrate front-end Interface with backend data using technologies like MySQL, and PHP.
- Followed Agile methodology for UI Development.
- Enhanced screen resolutions using Bootstrap and CSS3 media queries.
- Fetched backend data in JSON/XML formats using AJAX and integrated it into the application.
- Bootstrap is used for making the pages responsive to the changes in User Interfaces
- Implemented vigorous cross-browser compatibility checks.
- Used Node.js (npm) as the package manager for development workflow-dependent plugins.
- Resolved several cross-browser compatibility issues across application pages.

Environment: React JS, HTML5, CSS3, J Query, Bootstrap, Ajax, PHP, MYSQL

Project: (Virology tracker for Hospitals/Accounts)

The objective of the project is to develop an interactive Business Intelligence Tool for the users to track the KPIs for a pharmaceutical drug coming from various Hospitals/Accounts. The tool is used by Salesforce to assess the

Business coming from the Targeted hospitals/Accounts and their associated physicians. The tool tracks the goal vs actual KPIs extremely useful for the Salesforce team to enhance the performance.

Responsibilities:

- Involved in developing UI pages using HTML5, XHTML, DOM, CSS3, JSON, JavaScript, JQuery, and Ajax.
- Good experience of Client-Side Validation using JavaScript.
- Used AJAX for implementing Dynamic Webpages where the content was fetched via API calls and updated the DOM (JSON Parsing).
- Implemented Angular frameworks in AJAX-driven websites using a proxy to get the data from the back-end in the form of JSON.
- Used Bootstraps JS along with Angular in creating the Single Page Applications (SPA).
- Worked with validation of angular forms, custom filters, directories and file organizations, event handlers, and angular animations.
- Designed front end with JavaScript framework in Angular and JQuery.
- Utilized Angular, Node.js, and Express framework to create dynamic data-driven web pages when writing SQL queries with Joins on multiple tables using MySQL

Environment: Angular 2.0, HTML5, CSS3, J Query, JSON, Bootstrap, Ajax, PHP, MYSQL

Miracle Software Systems, India
Web Developer

Aug 2012 – Nov 2015

Project: Scan Source UI Application

The main objective of the application is to provide people counting data to the user as well as enables the user to manage resources and access the data. Additionally, the application should be structured to allow extra data services which potentially would be developed later either by 1UP Media or third-party developers. To fulfill the requirements, Angular, a modern framework, was used for its Model-View-Controller architecture allows developers to separate an application's business logic and behavior logic from its presentation. As long as the application is divided into cohesive loose-coupled components, which are carefully documented, new services can be added with minimal effort.

Responsibilities:

- Designing and developing Responsive web pages for the client
- Extensive usage of HTML5, CSS3, PHP, BOOTSTRAP, Angular 2.0 for Responsive Web design for the web page development
- Gained knowledge of the business processes with experience in requirements gathering, understanding in-scope, out-scope features
- Page Layout design as per the requirement targeting cross platforms using RWD (Responsive Web design)
- Complete E2E support including front end and back end features and functionalities
- Worked on Backend services layer, DB features, and functionalities, coordinating with business on all aspects

- Extract backend data in the required format (JSON/XML) using AJAX call and integrate it into the application.
- Used JQuery for the interaction of the websites.
- Used AJAX Restful APIs to grab the data to make the site more dynamic.
- Used agile methodology for software development.
- Worked with the QA team to fix the bugs, test the load, and performance checking.
- Involved in understanding functional specifications and developing creative solutions to meet business requirements.

Environment: Angular 2.0, HTML5, CSS3, J Query, JSON, Bootstrap, Ajax, PHP, MYSQL

EDUCATION:

- B. Tech from MVGR College of Engineering, Visakhapatnam, AP, INDIA - 2012.
